Bring home a life, bring home happiness – with Sure Start

For millions of economically disadvantaged women in India, a healthy pregnancy and safe childbirth have been beyond reach. Sure Start’s innovative approaches in urban and rural health for disadvantaged communities have addressed specific needs related to maternal and newborn health and given new hope to women and their families.

Birth of a newborn signifies the arrival of new life, which brings joy, happiness, and celebration. The overarching message of Sure Start is this emotion of bringing home a life, bringing home happiness. By giving women confidence that they will see their babies healthy and that their daughters will also be taken care of when it is their time to bring new life into the world, Sure Start has helped these women live their dreams.
When Zeenat came to Pune from her village, the problems of coming to terms with the urban environment and the hardships of living in a slum were compounded by another. She was pregnant. This was her first time, and apart from her husband, she had no family to guide her.

Urmila Tai, a link worker from Sure Start, was a godsend. Urmila helped Zeenat register for antenatal care and spoke to her about the need to take care of herself, for her sake as well as for the sake of the unborn child. “I was hesitant at first,” says Zeenat, who is 20 years old. “Gradually, I found it easy to talk to her, to confide in her.”

“Tai even got me iron supplements and told me what and how much to eat. She taught me how to recognize signs of alarm and what to do during an emergency. She accompanied me to the health post for my first antenatal checkup. She was also there with me for the following two antenatal checkups in the coming months.”

One morning, Urmila responded to an emergency call from Zeenat’s husband. Zeenat was writhing in pain and bleeding and had to be rushed to a nearby private hospital, which referred her to the nearest government hospital, as both mother and baby were in danger. Urmila asked the couple to gather courage and be strong. She rushed Zeenat to the government hospital, where she was admitted immediately because her condition was deteriorating. Clearly, this was going to be a complicated birth. Zeenat received timely care, including sonography, tests, and a blood transfusion.

Two days later, Zeenat delivered a tiny baby girl, 1.5 kg, with breathing difficulty. The baby was put in the intensive care unit, where specialized care was administered.

Zeenat returned home after 20 days in the hospital. “Munni and I, we owe our lives to Urmila Tai. I cannot imagine what would have happened to us if she had not been there by us all the time and shown us the way,” beams Zeenat.

Like Zeenat, millions of expectant and new mothers in the Indian states of Maharashtra and Uttar Pradesh now have guides like Urmila Tai. Urmila is one of the many community health workers trained under PATH’s Sure Start project to equip women like Zeenat with enhanced knowledge of maternal and newborn health, the importance of prenatal care, danger signs during pregnancy, and about birthing and the postpartum period.

Through 2011, PATH’s Sure Start, along with our partners, reached 24.5 million people in India, imparting information on pregnancy, childbirth, and available services. These women no longer face motherhood unprepared and alone, and their children have a better chance of a healthy beginning to life.

Accredited Social Health Activists and community health workers/link workers have been the pillars of Sure Start’s success in Uttar Pradesh and Maharashtra.

The essence of Sure Start’s work was to transform communities from passive onlookers to agents of change through extensive involvement in urban and rural societies.

Sure Start empowered health workers with training, information, and toolkits to go into homes and explain safe birth practices. They addressed myths and misconceptions and advocated good practices, such as institutional delivery and complete antenatal and postnatal care, with ill-informed and reluctant families. They were trained to identify eligible couples and conduct menstrual surveillance, early registration of antenatal care, and follow-up visits for postnatal care, as well as to maintain records.

Sure Start is full of stories of ASHAs, community health workers, volunteers, and link workers who reached out to women among the rural and urban poor, offering information, practical solutions, and emotional support to help women take charge of their own health and that of their children.

“Earlier, people were somewhat suspicious, and some even forbade me from coming into their houses. But now I get a lot of respect. People ask me to sit, offer tea, and actually listen to what I say.” –Sonali Shinde, a link worker in Navi Mumbai.

“I do this to pay my debt to the country. I understand I can’t do big things; I can at least bring about a change in my neighbourhood.” –Shamshad Sheikh, a Sure Start community health worker in Uttar Pradesh.

ASHAs and other community health workers like Sonali Shinde and Shamshad Sheikh are the true heroes of Sure Start. They formed a network of highly motivated women from the community who were empowered with training, skills, and information to help increase healthy behaviours in maternal and newborn health. It is this network that made Sure Start a success. Sure Start salutes these women and their spirit.
Synchronization: Sure Start and the National Rural Health Mission in Uttar Pradesh

National Rural Health Mission

Sure Start

Provision of an incentive-based health volunteer Mentoring and building the capacity of approximately for every 1,000 population. 7,450 Accredited Social Health Activists.

Decentralized planning and establishment of Village Facilitating district-, block-, and village-level planning and review. Strengthening VHSCs consisting of village-level elected representatives.

Increased emphasis on public-private partnership. Information, education, and communication activities for creating demand.

Two-way flow of data.

Achieving Millennium Development Goals for India

Most women hope to be a mother at some point in their lives. Yet this normal, life-affirming process carries with it risks of death and disability. Maternal mortality and morbidity are sensitive indicators of the functioning of the health system, as well as the degree of equity in public service delivery and utilization and the social status of women. Improving maternal and maternal outcomes in India is critical to achieving Millennium Development Goals 4 and 5.

The government’s National Rural Health Mission (NRHM) was launched in April 2005 to provide accessible, affordable, high-quality health care to rural populations, especially poor women and children, with special focus on states that have relatively weak public health indicators or weak infrastructure. NRHM was conceived as an umbrella programme subsuming the existing programmes of health and family welfare, including Reproductive and Child Health, Phase II, and National Disease Control Programmes. The goals of NRHM include reduction in infant mortality rates and maternal mortality ratios, universal access to public health services, and decentralization of programmes for district management of health. Key features include making the public health delivery system fully functional and accountable to the community, human resource management, community involvement, decentralization, rigorous monitoring and evaluation, convergence of health and related programmes, innovations and flexible financing, and interventions for improving health indicators (National Rural Health Mission Framework for Implementation, Ministry of Health and Family Welfare, Government of India, July 2006).

Sure Start complemented and strengthened NRHM while offering a scalable model of one-on-one mentoring and support of frontline health workers in rural populations in seven districts of Uttar Pradesh.

The project used an innovative system of menstrual surveillance–community-based surveillance of eligible women to identify early pregnancy–to ensure registration of pregnancy within 12 weeks.

The city-specific models implemented by Sure Start to improve maternal and newborn health were:

- Mumbai Model for improving Maternal and Newborn Health status through improved quality of care.
- Navi Mumbai Model for using public-private partnerships.
- Pune Model for convergence of maternal and newborn health and HIV.

- Solapur Model for building social capital for Maternal and Newborn Health through self-help groups and volunteers.
- Nanded Model for implementing community-based health insurance.
- Malegaon Model for improving quality of care by developing client satisfaction norms.
- Nagpur Model for introducing a prepaid card.
- Nagpur Model for introducing an emergency health fund.

Detailed information on the city-specific models is available upon request.

Sure Start adopted core interventions that formed a Common Minimum Programme in seven cities in select slum pockets. Health workers followed a structured schedule of home visits during antenatal and postnatal periods, and strong linkages were built with public facilities. The programme complemented and served as a catalyst for the government’s reproductive and child health programme.

PATH is proud to have collaborated with its 95 partner organizations in Maharashtra and Uttar Pradesh, which were crucial to Sure Start’s success. Sure Start collaboratively strengthened its partners’ capacities in areas such as advocacy, financial management, and capacity-building. Sure Start along with its partners has mentored ASHAs and community health workers and revitalized community groups in villages to take out the message of best practices in maternal and newborn health to the women. The strength of this great network demonstrated that simple interventions and mobilizing community action can lead to improving maternal and newborn health in urban and rural settings.

In Maharashtra, Sure Start supported city-specific and cross-site (thematic) projects especially designed for cities with large and growing slum populations. Needs-based behaviour change communication through interpersonal communication, in the form of interactions during home visits, was the core intervention strategy.

Achieving Millennium Development Goals for India

Most women hope to be a mother at some point in their lives. Yet this normal, life-affirming process carries with it risks of death and disability. Maternal mortality and morbidity are sensitive indicators of the functioning of the health system, as well as the degree of equity in public service delivery and utilization and the social status of women. Improving maternal and maternal outcomes in India is critical to achieving Millennium Development Goals 4 and 5.

The government’s National Rural Health Mission (NRHM) was launched in April 2005 to provide accessible, affordable, high-quality health care to rural populations, especially poor women and children, with special focus on states that have relatively weak public health indicators or weak infrastructure. NRHM was conceived as an umbrella programme subsuming the existing programmes of health and family welfare, including Reproductive and Child Health, Phase II, and National Disease Control Programmes. The goals of NRHM include reduction in infant mortality rates and maternal mortality ratios, universal access to public health services, and decentralization of programmes for district management of health. Key features include making the public health delivery system fully functional and accountable to the community, human resource management, community involvement, decentralization, rigorous monitoring and evaluation, convergence of health and related programmes, innovations and flexible financing, and interventions for improving health indicators (National Rural Health Mission Framework for Implementation, Ministry of Health and Family Welfare, Government of India, July 2006).

Sure Start complemented and strengthened NRHM while offering a scalable model of one-on-one mentoring and support of frontline health workers in rural populations in seven districts of Uttar Pradesh.
As the name suggests, this campaign featured a letter from an unborn baby to its father. The letter was an emotional appeal from the baby urging its father to ensure necessary care and support for the well-being of both the child and the mother.

PATH is the secretariat for the Uttar Pradesh chapter of the White Ribbon Alliance. The alliance is actively engaged in advocacy and collaboration to build an environment conducive to maternal and newborn health.

Sure Start’s innovative and careful communication strategy has results to prove its success, based on the project’s endline evaluation:
- 89.7% of women now receive tetanus toxoid vaccine by their third trimester.
- 66.6% of women now consume iron and folic acid tablets during pregnancy.

By bringing village women together to act on health needs and seek services, Sure Start has played a significant role in improving antenatal and postnatal care, skilled attendance at delivery, and healthy newborn practices in the home. Sure Start’s innovative models for mobilizing communities and improving health care for maternal and newborn health are scalable and can build strong linkages between the community and the public health care delivery system.

MARY TAYLOR | Senior Program Officer | Bill & Melinda Gates Foundation
The National Urban Health Mission (NUHM) envisaged by the Government of India will address the health care needs of urban dwellers, including the urban poor. It will include institutional arrangements for its implementation, broad norms, financial resources, appraisal and approval processes, a role for community organizations, standards for facilities, and a mechanism for engaging local health care providers (National Urban Health Mission Framework for Implementation, Ministry of Health and Family Welfare, Government of India, June 2010).

In Maharashtra, Sure Start effectively engaged with the issues that the forthcoming NUHM document addresses. Sure Start engaged communities in bringing about positive behaviour change in maternal and neonatal health among people living in the slums of seven urban cities of Maharashtra.

Community interventions to strengthen health systems, particularly primary care services, hold promise for improving maternal and neonatal outcomes in India. A simple health system design innovation that may help to improve outcomes is integration of previously separate maternal and newborn health care programmes and initiatives.

PATH’s Sure Start was a community health intervention project that endeavoured to integrate neonatal and maternal health services. Customized to rural and urban needs, it built a supportive environment for enhancing maternal and neonatal health through an integrated community health solution. The project strengthened community systems to facilitate effective community action.

Sure Start helped to put the health of mothers and newborns first, both in rural communities of Uttar Pradesh and among settlements of marginalized people in Maharashtra’s sprawling cities. It had the twin objectives of:

- Significantly increasing individual, household, and community actions that directly and indirectly improve maternal and newborn health.
- Enhancing systems and institutional capabilities for sustained improvement in maternal and newborn care and health status.

To achieve this, Sure Start adopted a fivefold strategy for effective community outreach:

- Mobilizing the community, creating demand, and facilitating an enabling environment for individual, household, and community action.
- Building household skills in maternal and newborn health care and in promoting healthy behaviours.
- Facilitating access to skilled attendants at birth.
- Strengthening community-level networks to promote collective action.
- Strengthening linkages between communities, health care systems, and public and private service providers.

With funding from the Bill & Melinda Gates Foundation as part of its Community Health Solutions Initiative, Sure Start worked with 95 partners to effect sustainable change in a target population of 24.5 million people in Uttar Pradesh and Maharashtra.

Sure Start developed scalable models of one-on-one mentoring and support of frontline health workers in rural populations in seven districts of Uttar Pradesh and for urban slum populations in seven cities of Maharashtra, covering a total population of 24.5 million.

In Uttar Pradesh, interventions were planned in rural areas with the highest rates of neonatal mortality and home births and with poor health service delivery systems. Low awareness of healthy behaviours related to maternal and newborn health was a key reason to adopt these rural districts. Sure Start’s five lead partners and 55 sub-partners led work in Uttar Pradesh, covering a population of 23 million people across seven districts.

In Maharashtra, interventions in urban slums were planned based on factors such as rapid urbanization, a growing migrant population, poverty, and a special need to improve maternal and newborn health among marginalized groups.

The benefits of urbanization have eluded this burgeoning urban poor population, most of whom live in slums. Rapid migration of workers from rural areas into big slums in Maharashtra and relatively inadequate urban health infrastructure and poor extension services were key reasons to select these seven cities.

In Maharashtra, PATH implemented Sure Start through six nongovernmental organizations and a municipal corporation. Thematic inputs such as behaviour change communication, management information systems, and media advocacy were provided by two cross-site partners. Sure Start covered a population of 1.6 million people across seven cities in Maharashtra.

My heartiest congratulations to Team Sure Start— all the volunteers, community health workers, and community groups—for doing this amazing work to improve maternal and newborn health in India. The metrics—such as the increase in registration of pregnancy within 12 weeks from 76% to 90% in Uttar Pradesh and from 41% to 54% in Maharashtra, and the substantial increase in the number of women opting for institutional deliveries from 24% to 57% in rural areas and from 78% to 88% in urban areas—are proof of the very good work done by the team. The project’s relentless efforts to raise awareness on maternal and newborn health using innovative models and communications techniques has resulted in positive behaviour change, saving lives of mothers and newborns.

STEVE DAVIS | Director of Social Innovation | McKinsey & Company
About PATH

PATH is an international nonprofit organization that transforms global health through innovation. We take an entrepreneurial approach to developing and delivering high-impact, low-cost solutions, from lifesaving vaccines and devices to collaborative programmes with communities. Through our work in more than 70 countries, PATH and our partners empower people to achieve their full potential. For more information, please visit www.path.org.

We are grateful to the Bill & Melinda Gates Foundation, which provided grant support for the Sure Start project.
