Collecting the right amount of blood and the right amount of mix is VERY important in order to have a correct result.

When you touch the Ezi Tube+ to the blood drop or mix, the liquid will AUTOMATICALLY fill the Ezi Tube+ up to the black line. Do NOT remove the Ezi Tube+ too early. When held correctly, the Ezi Tube+ will collect the right amount.

When you need to push out the blood or mix, hold the bulb of the Ezi Tube+ and cover the hole.

Pay attention to bubbles in and around the Ezi Tube+. If bubbles are present, discard the Ezi Tube+ and try again.

**To draw up**

**To push out**
